

THE TISSUE AND CELL ENGINEERING SOCIETY (TCES)

The **Tissue and Cell Engineering Society UK (TCES)** has the aim of furthering knowledge, research and dissemination of information on cell and tissue engineering. Founded in 1999 by people coming from many different scientific disciplines and environments (industry, universities, research centres, government agencies) across the United Kingdom, TCES aims to promote the propagation of scientific information, stimulate the creation of research programmes, co-operate with other scientific organisations, and act as a source of expert information related to tissue and cell engineering.

Join the Society! Being a member comes with a range of benefits, including networking opportunities, information about PhD and job opportunities through our mailing list, a scientific membership on your CV, and eligibility for TCES bursaries and grants. Some University courses, like the MRes course in Tissue Engineering and Regenerative Medicine at the University of Manchester, have adopted TCES memberships for their students as a part of the course. Student memberships come at a discounted price of only 10 pounds per year!

Membership benefits include:

- Travel bursaries
- Funding for public engagement and small-scale scientific visits to other labs
- Prestigious award for early career researchers
- Information on PhD and job opportunities advertised regularly through email list and social medium accounts
- Discounted conference fees

For more information on how to become a member see our website: www.tces.org
